SUMMARY

Operations leader with 8+ years in a family construction-materials and real-estate group, rising from entry level to independent charge of three businesses by 2019. MS degrees from Columbia University (Engineering) and Pratt Institute (Data Analytics and Visualization, GPA 3.975/4.0). Structures ambiguous operating problems, decides on data and facts, negotiates with vendors, clients and counterparties, and turns analysis into stakeholder recommendations.

EDUCATION

Pratt Institute, School of Information, New York, NY **Jan 2022 – Dec 2023**
MS, Data Analytics and Visualization; Advanced Certificate, User Experience | GPA 3.975/4.0, with Distinction

Columbia University, School of Engineering and Applied Science, New York, NY **Sep 2014 – May 2015**
MS, Civil Engineering and Engineering Mechanics

University of Mumbai, Rizvi College of Engineering (RCOE), Mumbai, India **Jul 2010 – Jul 2014**
BE, Civil Engineering

EXPERIENCE

Family-Owned Business Group (Construction Materials, Real Estate), Mumbai, India **Jul 2015 – Present**

Head of Operations (part-time from Jan 2025) ***Apr 2024 – Present***

- Approved or declined orders, onboarded clients and set final prices across the ready-mix and asphalt, rock-crushing and materials-supply businesses, acting as their head and escalating only special cases.
- Core-team member on 3 land sales worth INR 100M+ in total (~US$1M+): internal pricing strategy on all three, buyer negotiation on the first, due diligence and paperwork on the first two.
- Part of the family team that negotiated and settled a boundary dispute with the adjoining rock-crushing operator over the family-owned quarry; led the demarcation, securing a clear boundary and preventing encroachment.
- Analyzed group finances (Excel, Python/SQL, Power BI/Tableau) for insights; cut expenses by retiring idle equipment, preventive maintenance and re-sourcing within the trusted vendor pool; rebalanced cash flow between entities.

Head of Operations, Construction Materials ***Oct 2019 – Dec 2021***

- Ran the concrete and asphalt supply business, a ready-mix plant and a rock-crushing unit with 60+ people combined (drivers, engineers, workers); made operating calls independently, escalating only decisions with major fiscal impact.
- Designed a fuel-control policy for a fleet of about 12 vehicles with no GPS (per-trip fuel logs vs per-vehicle benchmarks, ±5% tolerance); curbed fuel leakage and route deviations, cutting fuel cost an estimated 6–8% for the same distance.
- Set Covid-19 safety rules and staffing strategy: kept office staff remote despite pushback, allowed only essential staff on site and cut crews from two drivers to one per truck on short-haul routes, keeping deliveries running.
- Worked on site at plants, the quarry and construction sites (1–3 visits a week; dust, noise, heat, monsoon); gave regular feedback to logistics and supply managers, engineers and accountants.

Operations Manager, Materials Supply and Construction ***Jan 2018 – Oct 2019***

- Ran day-to-day materials-supply operations and construction requirements; planned supply routes and delivery schedules in Excel to fulfill client orders and contracts.

Management Trainee, Business Operations ***Jul 2015 – Dec 2017***

- Learned real estate marketing, construction and the materials supply chain; tracked day-to-day tasks in Excel.

Co-Founder and Creative Head, JAYHUES (apparel brand; DPIIT-recognized startup) **Jan 2025 – Present**

- Led product design, brand creative and market research; prepared the pitch deck and the DPIIT and funding applications; DPIIT-recognized Dec 2025; trademark filed May 2026.
- Co-built design-to-delivery supply chain with 4–6 fabric, tailoring and print vendors; built Excel order and billing models.
- Launched online store in Oct 2025 (Wix, then Shopify); ran fulfillment and Meta ads (INR 100K+ spend); 100+ orders.

Volunteer Data Analyst and Developer, Model Earth (open-source data platform) **Jan 2024 – Mar 2024**

- Joined via DemocracyLab; resolved 15+ front-end and data issues (JavaScript/D3.js, Python/Pandas, data pipelines) within weeks; onboarded newer volunteers on project scope and code; work is public on GitHub.

SELECT PROJECTS (PRATT INSTITUTE)

- **Client project, NYC Dept. of Design and Construction (2023, team of two):** ran UX research (user and stakeholder interviews), prototypes and user tests for an app that improves how the agency communicates subsurface infrastructure projects; presented findings and insights to the client.
- **Client usability study, Friends of Crocheron & John Golden Park (2022, team of five):** ran remote moderated user tests with 8 participants on a park non-profit's website; ranked findings by severity into four priority problems; presented insights, recommendations and mock-ups live to the client, with a report and deck.

SKILLS

Analytics: Excel/Google Sheets, PowerPoint, SQL, Python (Pandas), Power BI, Tableau
Business: financial and cash-flow analysis, supply chain, pricing, negotiation, vendor management, route planning
Product and digital: UX research, Figma, Adobe Illustrator and Photoshop, Shopify, Meta Ads
AI tools: Gemini, Claude, ChatGPT
